

## AAG and IAAG BATTERY CHARGER

The batteries in the AAG or IAAG can be charged using either the AAG and IAAG Battery Charger or the Programming Unit.

The Battery Charger was designed to be used on the deck of the ship; leaving the more valuable Programming Unit on deck for long periods during charging, is undesirable.

Parameter	Value
Length	3150mm
Width	220mm
Height	110mm
Shipping Mass	9kg (Includes Cables)
